

For buyers:

For instance: A buyer A wants to buy a HP Printer. The buyer inputs “HP Printer” in the search bar. All information about HP Printer of different types appears. Then,

- **The buyer can sort them by price, by size, by countries or by other specifications.**
- **The buyer can make comparisons with other models or other brands**
- **The buyer can see the comments about the printers.**
- **The buyer download data sheets of the products, the comparison and the contact info about the distributors.**
-

All these above can help buyers to make good decisions.

For sellers (manufacturers or distributors or even retailers):

This platform offers sellers API. Then

- **sellers can input their product info quickly using a single template.**
- **sellers can get well-structured product info as soon as they completes the input**
- **if sellers allow this platform to access their ERP, their product info can be updated automatically.**

Coding languages and other techniques may be involved in this project:

HTML, CSS, javascript, SQL, C++, PHP, cloud computing, taxonomy, UI design, etc.
